

Falcon Replaceable Cartridge

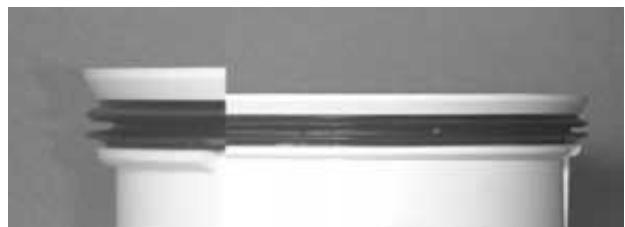

Our proprietary cartridge is the heart of the Falcon urinal system. It serves four functions. First, it acts as a funnel, allowing liquid from the bowl to flow into the cartridge. Next, the cartridge holds the sealant liquid that creates a barrier between urine and the open air, thereby eliminating odors. Third, the cartridge acts as a filter for uric sediment. Much of the sediment that can cause drainage pipe corrosion is trapped at the bottom of the cartridge. Last, the cartridge allows the remaining urine to be freely disposed down the drain.

Each replacement cartridge comes with the cartridge, a plastic key for removal and installation, pre-measured liquid sealant pack, disposal bag, plastic glove and changing instructions.

Features

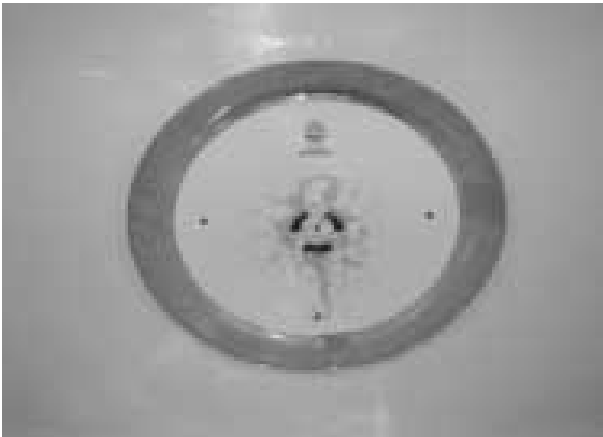

- Made from recyclable ABS plastic
- Sealant liquid is 100% biodegradable
- Average life cycle of 7,000 uses, conserving approximately 10,000 gallons of fresh water per unit
- High quality O-ring creates durable, positive seal between urinal and cartridge.

- Easily installed and removed with simple to use key.

- Easily monitored to detect need for replacement: trace amounts of blue sealant will appear.
